	5.1 Books (if any, which is applicable)	
	5.2 Research papers (if any, which is applicable)	
	5.3 Internet link (if any, which is applicable)	

1. Introduction of System

Academic institutions often require students to submit projects for evaluation. Traditionally, this process involves printing, binding, and physically submitting documents, which is time-consuming and resource-heavy.

The *Online Project Submission System* is a web-based application that allows students to upload their project reports digitally. Faculty members can access these submissions, evaluate them, and provide feedback—all within the same platform.

This system ensures:

- **Transparency** in submission and evaluation.
- **Efficiency** by reducing manual paperwork.
- **Accessibility** as projects can be reviewed anytime, anywhere.
- **Security** through centralized storage and controlled access.

---

2. Existing System and Drawbacks

The current manual submission process has several limitations:

- **Physical dependency:** Students must print and bind reports, which increases cost and effort.
- **Risk of loss/damage:** Hard copies can be misplaced or damaged.
- **Time-consuming evaluation:** Faculty must manually collect, sort, and store submissions.
- **Limited accessibility:** Projects are available only in physical form, making remote evaluation impossible.
- **Environmental impact:** Excessive use of paper contributes to waste.

These drawbacks highlight the need for a digital, centralized solution.

---

3. Proposed System and Objectives

The proposed *Online Project Submission System* addresses these issues by providing a secure, user-friendly, and efficient platform.

Features:

- **Student Portal:** Students can register, log in, and upload project files in PDF/DOC format.
- **Faculty Portal:** Faculty can view submissions, download files, and provide grades/comments.
- **Deadline Management:** Automatic reminders and submission cut-offs.
- **Database Integration:** Centralized storage with backup facilities.
- **Search & Retrieval:** Easy access to past submissions for reference.

Objectives:

1. To eliminate the need for physical project submission.
2. To provide a transparent and efficient evaluation process.
3. To maintain a secure digital repository of student projects.
4. To reduce administrative workload and paper usage.
5. To enable remote access for faculty and students.

---

4. Operating Environment – Hardware and Software

Hardware Requirements:

- **Server:**
  - Processor: Intel i5 or above
  - RAM: 8 GB minimum
  - Storage: 500 GB HDD/SSD
- **Client Systems:**
  - RAM: 4 GB
  - Internet connectivit

Software Requirements:

- **Frontend:** HTML, CSS, JavaScript
- **Backend:** Python
- **Database:** PostgreSQL
- **Operating System:** Windows/Linux
- **Browser:** Chrome/Firefox

The system will be hosted on a local server initially, with potential migration to cloud platforms (AWS/Azure) for scalability.

---

5. Bibliography (Reference)

5.1 Books

- Silberschatz, "Database System Concepts", McGraw Hill, 2019.
- Rajkumar Buyya, "Cloud Computing Principles and Paradigms", Wiley, 2018.
- Pressman, "Software Engineering: A Practitioner's Approach", McGraw Hill, 2017.

5.2 Research Papers

- Sharma, "E-Learning and Online Submission Systems", IEEE Conference on Education Technology, 2021.
- Gupta & Mehta, "Digital Transformation in Academic Institutions", Springer, 2020.
